

Easi-Portable Deck Assembly Instructions

All you need is a reasonably flat surface.

1. Unroll the foundation

2. There are 4 shorter spreaders, set them on the outside the foundation sleeper boards

3. Install the 1 X 2 spreaders to properly set the size of the foundation to accept the pre-sized deck tiles.

4. Set the two remaining larger spreaders between the foundation sleepers. During shipping the foundation mesh may shrink if so, use your foot to spread the foundation sleepers to install these last two boards if necessary.

5. Completed foundation spreaders installed. Your foundation should look like this before installing the deck tiles.

Bonus: Our Deck tiles are equipped with handles for easy carrying.

6. Set 1st and 2nd deck tiles, line up the outside edge to ensure velcro connectors adhere to each other

7. Set 3rd and 4th deck tiles, ensure they are true and square to foundation edge and first 2 deck tiles

8. Set 5th and 6th deck tiles, these last two tiles should line up with the foundation edge. If not, check the other tiles to ensure they are properly set and square to the foundation base.

Now you can enjoy your new deck in your backyard, RV, condo, beach etc.

You can combine deck packages to make an even larger deck to suit your needs.
